At Budlake Nursery we take special care growing our Acer's. With a large collection of Acer Palmatum, we stock over 90 different cultivars.

Our plants are grown naturally in peat-free soil using EM Effective Micro-organisms, Actiferm.

Mixing our own potting soil gives the young stock the best start promoting healthy root systems. using a peat-free base and adding slow release Ostrea seashell lime, Bokashi bran, Grow-Best organic fertiliser, Edasil clay minerals and Vulkamin minerals ensures the best start and a continued healthy plant development coming from the roots upwards.

The micro-organisms are active in the root zone and facilitate a better nutrient uptake.

Adding EM Actiferm to the irrigation water is a simple and cost effect way of boosting the friendly and beneficial bacteria in the soil.

Acers
Available in
3/5/10
Litre pots

Our beautiful Acers change colour with the seasons bringing colour and beauty to any garden.

It is easy to create stunning visual effects in 'your' garden.

Adding 'EM Actiferm' 3 times a year, to the irrigation watering system, keeps the 'life' in the soil at an optimal balance, boosting the plants immune resistance against disease giving strong root systems.

Benefits of using EM Effective micro-organisms

- Increased Soil Fertility
- Improved Resistance to Disease
- Increased Yield and Plant Health
- Better Root Formation
